Promises and Challenges of Model-Based Design

CAMPaM workshop, Bellairs Research Institute, Barbados

Model Everything ... Explicitly

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

The spectrum of uses of models

Documentation

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

- Documentation
- Formal Verification of Properties (all models, all behaviours)

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

- Documentation
- Formal Verification of Properties (all models, all behaviours)
- Model Checking of Properties (one model, all behaviours)

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

- Documentation
- Formal Verification of Properties (all models, all behaviours)
- Model Checking of Properties (one model, all behaviours)
- Test Generation

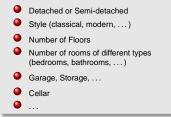

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

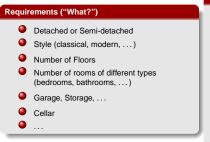

- Documentation
- Formal Verification of Properties (all models, all behaviours)
- Model Checking of Properties (one model, all behaviours)
- Test Generation
- Simulation (one model, one behaviour) ... calibration, optimization, ...

Model Everything ... Explicitly for **design** (Engineering) and **analysis** (Science)

- Documentation
- Formal Verification of Properties (all models, all behaviours)
- Model Checking of Properties (one model, all behaviours)
- Test Generation
- Simulation (one model, one behaviour) ... calibration, optimization, ...
- Application Synthesis (mostly for models of software)

Requirements ("What?")

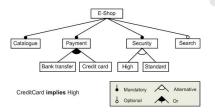

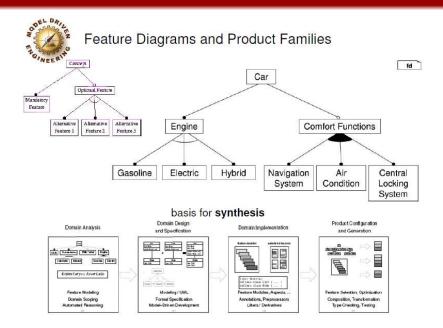

Design ("How?")

Requirements ("What?") Detached or Semi-detached Style (classical, modern, ...) Number of Floors Number of rooms of different types (bedrooms, bathrooms, ...) Garage, Storage, ... Cellar ...

Design ("How?")

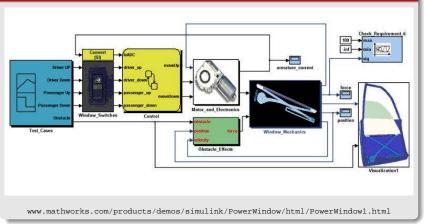

System Boundaries

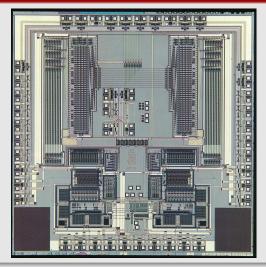

- System to be built/studied
- Environment with which the system interacts

System vs. "Plant"

Number of Components - hierarchical (de-)composition

Crowds: diversity, interaction

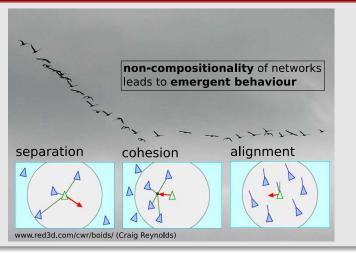

www.3dm3.com

Diversity of Components: Power Window

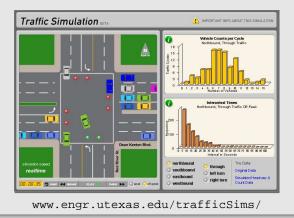

Non-compositional/Emergent Behaviour

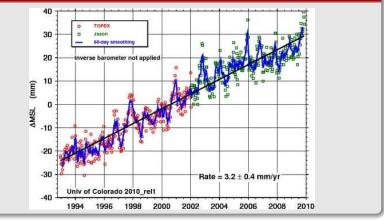

Uncertainty

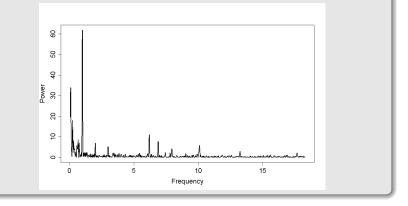

Often related to level of abstraction: for example continuous vs. discrete

Question: is the deviation from the trend periodic?

Answer: transform to make the solution obvious

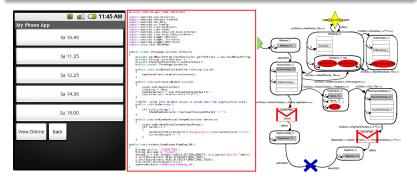

Guiding principle (\sim physics: principle of minimal action)

minimize accidental complexity, only essential complexity remains

Fred P. Brooks. No Silver Bullet – Essence and Accident in Software Engineering. Proceedings of the IFIP Tenth World Computing Conference, pp. 1069–1076, 1986.

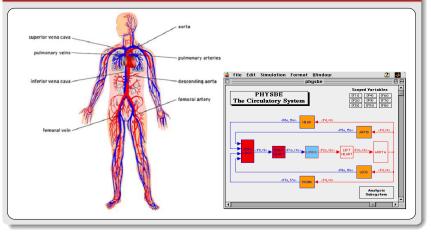

http://www.lips.utexas.edu/ee382c-15005/Readings/Readings1/05-Broo87.pdf

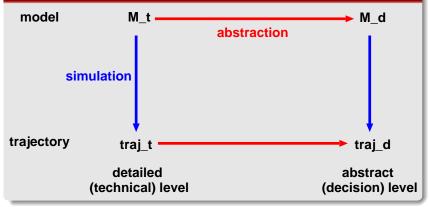

Dealing with Complexity: some approaches

- multiple abstraction levels
- optimal formalism
- multiple formalisms
- multiple views

Different Abstraction Levels – properties preserved

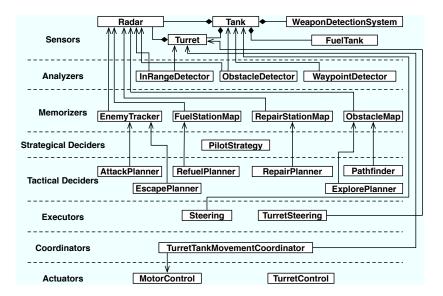

Levels of Abstraction/Views: Morphism

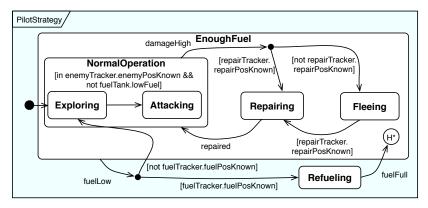

Most Appropriate Formalism (Minimizing Accidental Complexity)

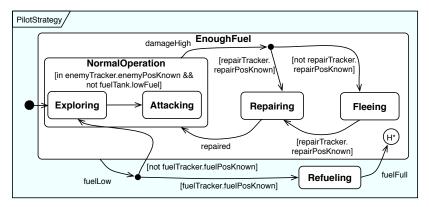

www.planeshift.it Massively Multiplayer Online Role Playing games need Non-Player Characters (NPCs)

Jörg Kienzle, Alexandre Denault, Hans Vangheluwe. Model-Based Design of Computer-Controlled Game Character Behavior. MoDELS 2007: 650-665

Could have used production rules instead of Statecharts

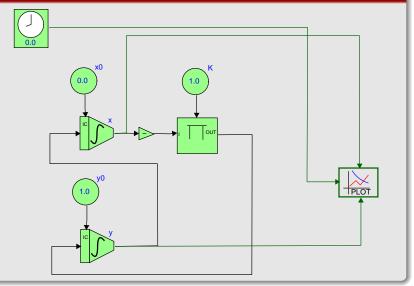

Eugene Syriani, Hans Vangheluwe: Programmed Graph Rewriting with DEVS. AGTIVE 2007: 136-151

"Management Flight Simulator" using Forrester System Dynamics model

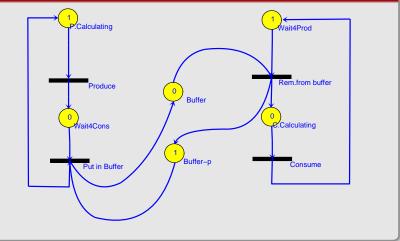

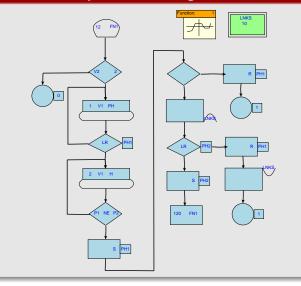

Causal Block Diagram model of Harmonic Oscillator

Petri Net model of Producer – Consumer

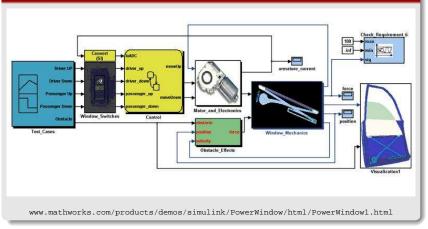

GPSS model of Telephone Exchange

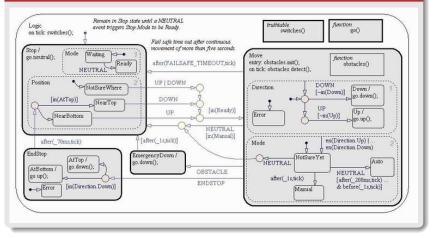

Multiple Formalisms: Power Window

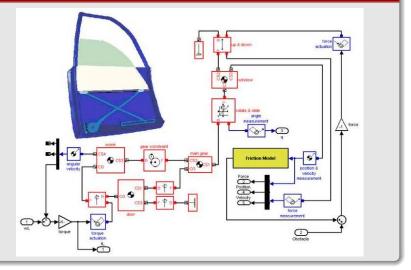

Components in Different Formalisms

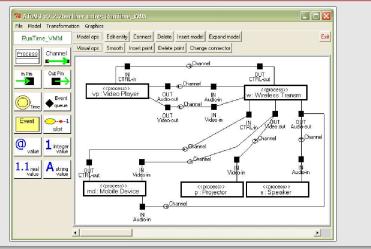

Controller, using Statechart(StateFlow) formalism

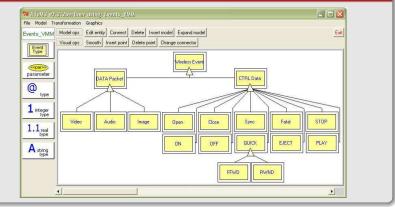

Mechanics subsystem

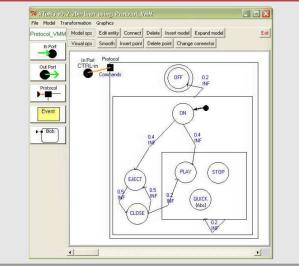

Multiple (consistent !) Views (in \neq Formalisms)

View: Events Diagram

View: Protocol Statechart

No Free Lunch!

Solutions often introduce their own accidental complexity

- multiple abstraction levels (need morphism)
- optimal formalism (need precise meaning)
- multiple formalisms (need relationship)
- multiple views (need consistency)

Multi-Paradigm Modelling (model everything, minimize accidental complexity)

- at the most appropriate level of abstraction
- using the most appropriate formalism(s)
 Class Diagrams, Differential Algebraic Equations, Petri Nets, Bond Graphs, Statecharts, CSP, Queueing Networks, Sequence Diagrams, Lustre/Esterel, ...

• with transformations as first-class models

Transformation: extract behaviour (Statechart)

Transformation: extract presentation

Only transform ...

Raphael Mannadiar and Hans Vangheluwe. *Modular synthesis of mobile device applications from domain-specific models*. Proceedings of the seventh International Workshop on Model-Based Methodologies for Pervasive and Embedded Software (MoMPES). 2010.

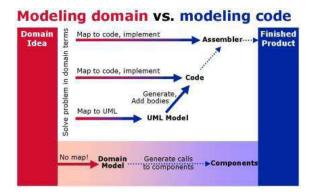

Why DS(V)M ? (as opposed to General Purpose modelling)

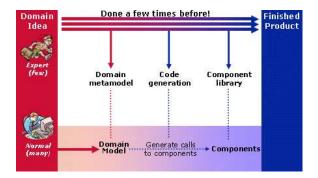

- match the user's mental model of the problem domain
- maximally constrain the user (to the problem at hand)
 - \Rightarrow easier to learn
 - \Rightarrow avoid errors
- separate domain-expert's work from analysis/transformation expert's work
- re-use transformation knowledge (such as in variations of a Domain-Specific formalism)

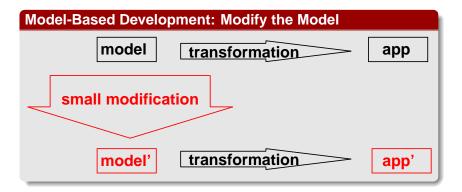

Anecdotal evidence of 5 to 10 times speedup
