# CS\&A: Lab Sessions 

Project: ALU<br>Ruben Van den Bossche

1BA INF - 2010-2011

## 1 Time Schedule

Projects are solved in pairs of two students. Projects build on each other, to converge into a unified whole at the end of the semester. During the semester, you will be evaluated three times. At these evaluation moments, you will present your solution of the past projects by giving a demo and answering some questions. You will immediately receive feedback, which you can use to improve your solution for the following evaluations.

For every project, you submit a small report of the project you made by filling in verslag.html completely. A report typically consists of 1000 words and a number of drawings/screenshots. Put all your files in a tgz archive, as explained on the course's website, and submit your report to the exercises on Blackboard.

- Report deadline: November, 7 2010, 23u55
- Evaluation and feedback: November, 92010

## 2 Project

Read section C. 5 of Appendix C. Build a arithmetic logic unit (ALU) for 16-bit two's complement data words. To do this, create a circuit that implements a 1 -bit ALU. Combine them to obtain a 16 -bit ALU. Implement the operations below, giving each operation a 4 -bit binary code. Your ALU will execute the right operation according to a 4 -bit operation input. Next to this, your ALU should have two 16 -bit words as input, one 16 -bit word as output, and one "error" bit as output, denoting an error.

Use the Logisim ALU_GroupXX.circ file provided on the course page.

Your ALU should be able to perform the following operations:

1. generate $\mathbf{0}$ (0000).

Example:
result | 0000000000000000
2. AND (0001).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 0010000000000010 |

3. OR (0010).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 1010110111111010 |

4. NOT (0011).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 1101101101010101 |

5. numeric inverse (two's complement) (0100).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 1101101101010110 |

Mind overflow!
6. numeric addition (two's complement) (0101). Ripple carry addition suffices.

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 1100110111111100 |

Mind overflow!
7. numeric subtraction (two's complement) (0110).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 0111101101011000 |

Mind overflow!
8. shift left (0111).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 0100100101010100 |

9. shift right (1000).

Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 0001001001010101 |

10. signed shift left (two's complement) (1001). This implements "times two".

Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 0100100101010100 |

Mind overflow!
11. signed shift right (two's complement) (1010). This implements "divide by two". Example:

| a | 0010010010101010 |
| :--- | :--- |
| result | 0001001001010101 |

Mind overflow!
12. less than (1011). Results in 1 if $\mathrm{a}<\mathrm{b}, 0$ if $\mathrm{a} \geq \mathrm{b}$.

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 0000000000000000 |

13. greater than (1100). Results in 1 if $\mathrm{a}>\mathrm{b}, 0$ if $\mathrm{a} \leq \mathrm{b}$.

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 0000000000000001 |

14. equals (1101). Results in 1 if $\mathrm{a}=\mathrm{b}, 0$ if $\mathrm{a} \neq \mathrm{b}$.

Example:

| a | 0010010010101010 |
| :--- | :--- |
| b | 1010100101010010 |
| result | 0000000000000000 |
