CS&A: Lab Sessions

Exercises: Regular Expressions

Ruben Van den Bossche

1BA INF - 2010-2011

1 Time Schedule

Exercises are made individually. Fill in all solutions to the exercises in the file `oefeningen.html`. **Include all commands you used to test your regular expressions.**

Put all your files in a tgz archive, as explained on the course's website, and submit your solution to the exercises on Blackboard.

- Deadline: **October, 18 2010, 23u55**

2 Exercises

1. Find a regular expression that matches a number at the end of a line.
2. Find a regular expression that matches filenames with a "tar.gz" extension.
3. Find a regular expression that matches all valid email addresses.
4. Find a regular expression that matches all words of 4 characters long.
5. Find a regular expression that matches any number between 1 and 999.
6. Find a regular expression that matches dates of the form:

   31/08/1933
   2-03-2002
   09 4 1966
   15.12.1999
7. Find a regular expression that matches an IPv4 number (0.0.0.0 to 255.255.255.255).
8. Find a regular expression that matches hexadecimal representations of the form:

   0x2a
   0XF
   0X1111
   0x0

9. Find a regular expression that matches floating point numbers. Some examples of floating points are:

   12.245
   -234
   +.0009
   3.11 e33
   43.1E11
   2e-14

10. Find a regular expression that matches strings surrounded by square brackets. Beware of greedy evaluation! For example, the HTML string `"Hello, <em>this</em> is emphasized."` should match twice, for `<em>` and for `</em>`.

11. Find a Sed command that extracts HTML tags (without attributes or nested tags) from a text. A text must be converted as follows:

    ```
    <h1>This is a valid HTML tag</h1>.
    <i>These</b> <1>invalid</i> <a}>tags</a}> should be ignored.
    ```

    Becomes:

    ```
    This is a valid HTML tag.
    <i>These</b> <1>invalid</i> <a}>tags</a}> should be ignored.
    ```
