

REDIP NOTES FOR 090/06 ✖

- Prototyping
- operational
- transformational (formal, synthesis)

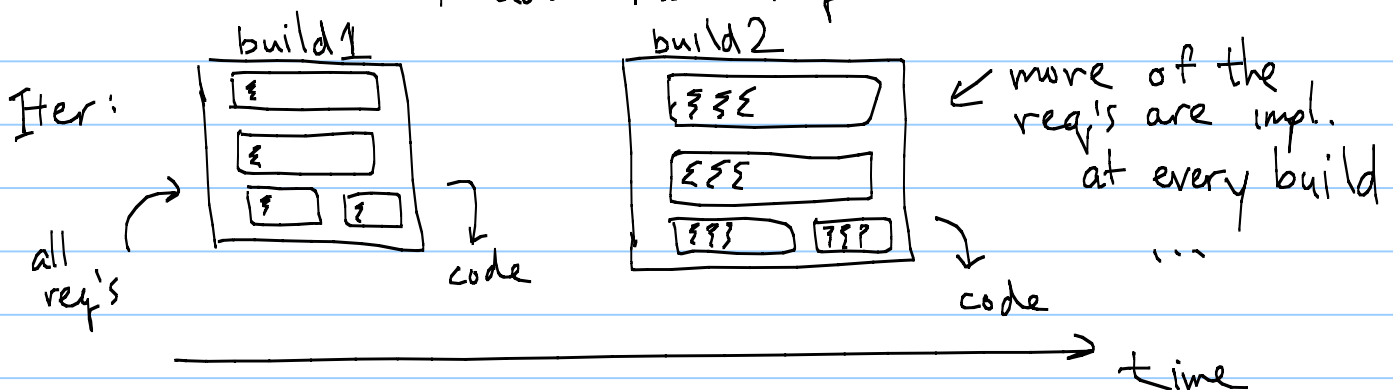

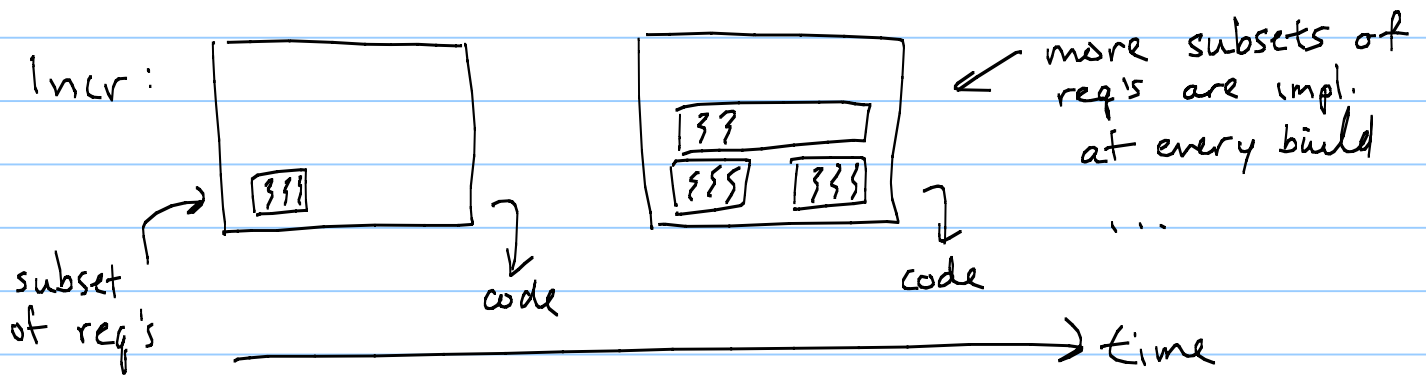

Phased Development

Iterative: every set of req's is implemented minimally
ie: every build adds more req's

Incremental: start with a subset of req's and every
build adds more req's

Iter. is better because we look at the big picture. Incr. can lead to conflicting code & req's at the end.

Spiral Model: Risk driven focused
