

MODELS 2007

ACM/IEEE 10th International Conference On Model Driven Engineering Languages and Systems

Nashville, TN – October 2

Program Co-Chairs

Pieter J. Mosterman
The MathWorks, Inc.

Tihamér Levendovszky
Budapest University of
Technology and Economics

Juan de Lara
Universidad Autonoma de Madrid

Program Committee

Peter Bunus
Linköping University
Michel Chaudron
Eindhoven University of Technology

Mirko Conrad
The MathWorks, Inc.

Jean-Marie Favre
University of Grenoble

Holger Giese
Universität Paderborn

David Hill
Blaise Pascal University

Jozef Hooman
Embedded Systems Institute

Gabor Karsai
Vanderbilt University

Thomas Kühne
Technische Universität Darmstadt

Klaus Müller-Glaser
University of Karlsruhe

Hessam S. Sarjoughian
Arizona State University

Mamadou K. Traoré
Blaise Pascal University

Jeroen Voeten
Eindhoven University of Technology

Hans Vangheluwe
McGill University

Second International Workshop on Multi-Paradigm Modeling: Concepts and Tools

Computational modeling has become the norm in industry to remain competitive and be successful. As such, Model-Based Design of embedded software has enterprise-wide implications and modeling is not limited to isolated uses by a single engineer or team. Instead, it has reached a proliferation much akin to large software design, with requirements for infrastructure support such as version control, configuration management, and automated processing.

The comprehensive use of models in design has created a set of challenges beyond that of supporting one isolated design task. In particular, the need to combine, couple, and integrate models at different levels of abstraction and in different formalisms is posing a set of specific problems that the field of Computer Automated Multiparadigm Modeling (CAMPaM) is aiming to address.

The essential element of multiparadigm modeling is the use of explicit models throughout. This leads to a framework with models to represent the syntax of formalisms used for modeling, models of the transformations that represent the operational semantics, as well as model-to-model transformations for inter-formalism transformation. These models are then used to facilitate generative tasks in a language engineering, such as evolving a domain specific modeling formalism as its requirements change, but also in a tool engineering space, such as automatic generation of integrated development environments. Moreover, given an explicit model of a model transformation allows analyses such as termination characteristics, consistency, and determinism.

Topics of interest include but are not limited to:

Language engineering

- * concepts for multiple paradigm composition
- * existing multiparadigm approaches
 - analysis
 - overview
- * composability
 - generic reasoning techniques
 - scalability of compositions

Tool engineering

- * concepts for tool support of multiparadigm modeling
- * tool support for compositional language constructs
- * multiparadigm modeling tools
- * tool interoperability

Applications

- * modeling concrete and abstract syntax and their relation
- * integration of visual and textual modeling techniques
- * executability and support for code generation
- * model transformation modeling
 - modularity
 - textual or visual specification
 - declarative vs. imperative approaches
 - execution control
 - verification of properties
- * traceability
- * model composition in different formalisms at the syntax and semantics level

Contributions should clearly address the foundations of multiparadigm modeling by demonstrating the use of models to achieve the stated objectives and discuss the benefits of explicit modeling.

Submission Procedure:

Papers must be submitted electronically as PDF via <http://avalon.aut.bme.hu/mpm07/>. Papers should not exceed ten (10) pages and follow the ENTCS style available at the workshop web site.

Papers will be peer reviewed. Accepted papers will be published in the workshop proceedings in the form of a technical report. The best two papers will be published in the LNCS series of Springer.

Important Dates:

Paper submission deadline: July 8, 2007
Notification of acceptance: August 7, 2007
Camera-ready papers due: August 24, 2007
