

Tool for Sketching Statecharts (TSS)

Shahla Almasri (salmas1@cs.mcgill.ca)

COMP 762B: Modelling and Simulation Based
Design

April 4th, 2005

Agenda

- Implementation Details
- SATIN
- Introduction to Statecharts
- TSS Syntax
- Demo
- Conclusion
- Future work

Implementation Details

- TSS is written in Java using JDK 1.5 and SATIN 2.3¹.
- Can be run on any machine that has JDK 1.4 or higher.
- It can be run using a stylus or a mouse.

1. Refer to reference [2] for detailed information.

Agenda

- Implementation Details
- SATIN
- Introduction to Statecharts
- TSS Syntax
- Demo
- Conclusion
- Future work

SATIN

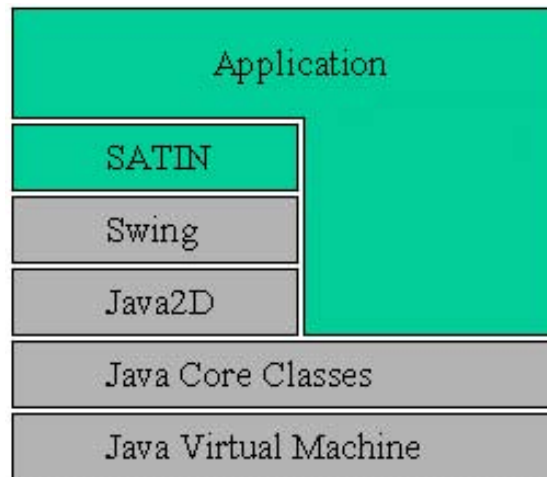

- Sketch and Transformational Infrastructure
(<http://quir.berkeley.edu/projects/satin/>)
- An open-source toolkit for developing informal ink-based applications.
- It only supports 2D applications.

SATIN (cont.)

- Built using JDK 1.3.
- SATIN is a layer on top of Swing.

This figure is taken from reference [2].

SATIN (cont.)

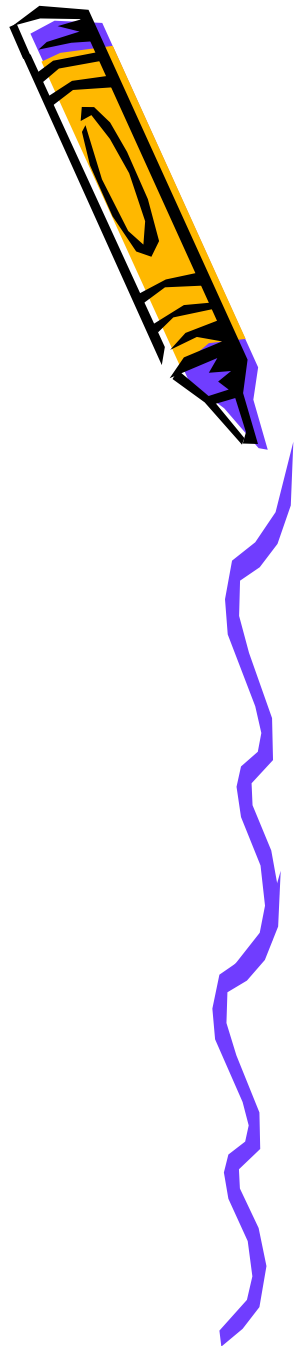

- SATIN comes with Quill, which is a tool for designing gestures for pen-based applications.
- SATIN framework comes with Rubine's¹ recognition algorithm, but other recognition algorithm can easily be plugged in.

Agenda

- Implementation Details
- SATIN
- Introduction to Statecharts
- TSS Syntax
- Demo
- Conclusion
- Future work

Introduction to Statecharts

- An extension of finite state automata.
- Invented by David Harel in the late 1980s.
- It was adopted by UML for describing reactive behavior.

Agenda

- Implementation Details
- SATIN
- Introduction to Statecharts
- **TSS Syntax**
- Demo
- Conclusion
- Future work

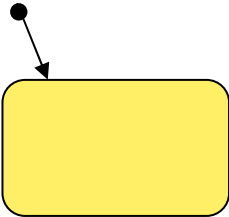

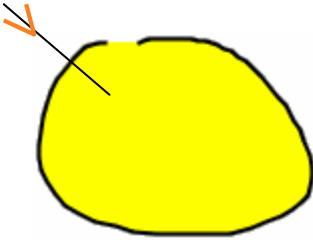

TSS Syntax

- Statecharts notations
- Supported characters
- Supported commands
- How gestures are interpreted
- Statechart diagram validation

Statecharts' Notations

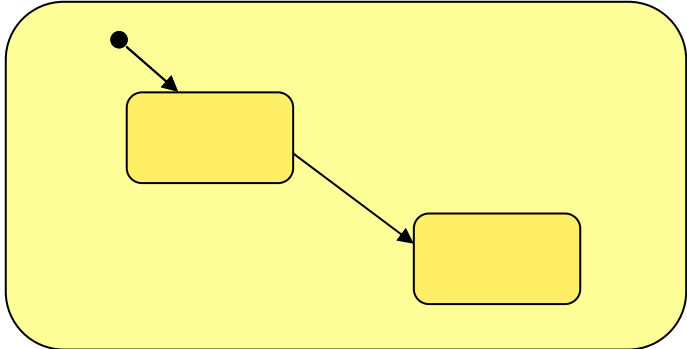

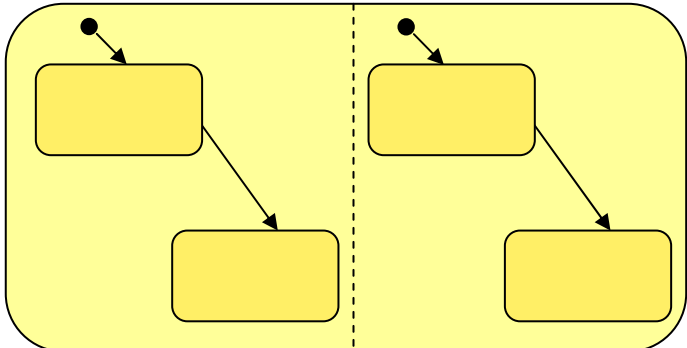

Notation	Harel's	TSS
States		 <p data-bbox="1150 472 1340 582">Recognized as state, therefore transformed to</p>  
Default States		 <p data-bbox="1182 825 1372 968">Recognized as default state, therefore transformed to</p>  

Statecharts' Notations (cont)

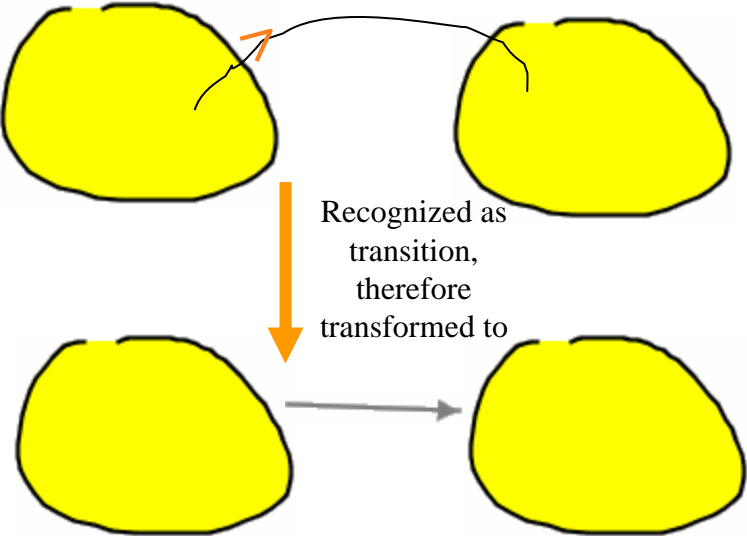

Notation	Harel's	TSS
Composite States		Not supported
Orthogonal States		Not supported

Statecharts' Notations (cont.)

Notation	Harel's	TSS
Transitions		 <p>Recognized as transition, therefore transformed to</p>
Labels	Any characters	a - z, ., /, [, and]

Supported Characters

a	A cursive lowercase letter 'a' with a small black dot at the top left and a curved arrow indicating the stroke direction.
b	A cursive lowercase letter 'b' with a small black dot at the top left and a curved arrow indicating the stroke direction.
c	A cursive lowercase letter 'c' with a small black dot at the top right and a curved arrow indicating the stroke direction.

d	A cursive lowercase letter 'd' with a small black dot at the top left and a curved arrow indicating the stroke direction.
e	A cursive lowercase letter 'e' with a small black dot at the top right and a curved arrow indicating the stroke direction.
f	A cursive lowercase letter 'f' with a small black dot at the top right and a curved arrow indicating the stroke direction.

Supported Characters (cont.)

g	
h	
i	

j	
k	
l	

Supported Characters (cont.)

m	A cursive lowercase letter 'm' with a black dot at the bottom left and a curved arrow indicating the stroke direction.
n	A cursive lowercase letter 'n' with a black dot at the bottom left and a curved arrow indicating the stroke direction.
o	A cursive lowercase letter 'o' with a black dot at the top and a curved arrow indicating the stroke direction.

p	A cursive lowercase letter 'p' with a black dot at the top and a curved arrow indicating the stroke direction.
q	A cursive lowercase letter 'q' with a black dot at the top and a curved arrow indicating the stroke direction.
r	A cursive lowercase letter 'r' with a black dot at the top and a curved arrow indicating the stroke direction.

Supported Characters (cont.)

s	
t	
u	

v	
w	
x	

Supported Characters (cont.)

y	A cursive lowercase letter 'y' with a small black dot at the top left and a curved arrow indicating the stroke direction.
z	A cursive lowercase letter 'z' with a small black dot at the top left and a curved arrow indicating the stroke direction.
.	A cursive lowercase letter period with a small black dot at the top left and a curved arrow indicating the stroke direction.

[A cursive uppercase letter '[' with a small black dot at the top right and a curved arrow indicating the stroke direction.
]	A cursive uppercase letter ']' with a small black dot at the top right and a curved arrow indicating the stroke direction.
/	A cursive lowercase letter '/' with a small black dot at the top right and a curved arrow indicating the stroke direction.

Supported Commands

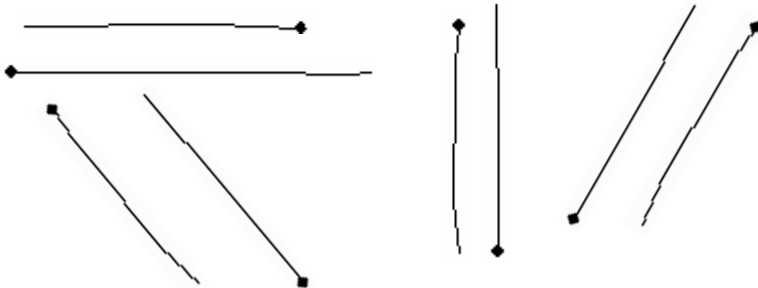

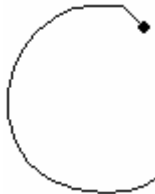

Command	Gesture	Pie Menu Item
New	None	Yes
Save	None	Yes
Open	None	Yes
Change Color	None	Yes

Supported Commands (cont.)

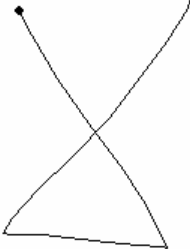

Command	Gesture	Pie Menu Item
Scroll		No
Copy		Yes

Supported Commands (cont.)

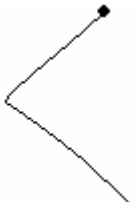

Command	Gesture	Pie Menu Item
Cut		Yes
Paste		Yes

Supported Commands (cont.)

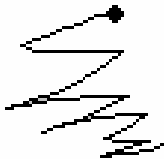

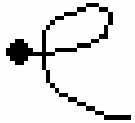

Command	Gesture	Pie Menu Item
Undo		Yes
Redo		Yes

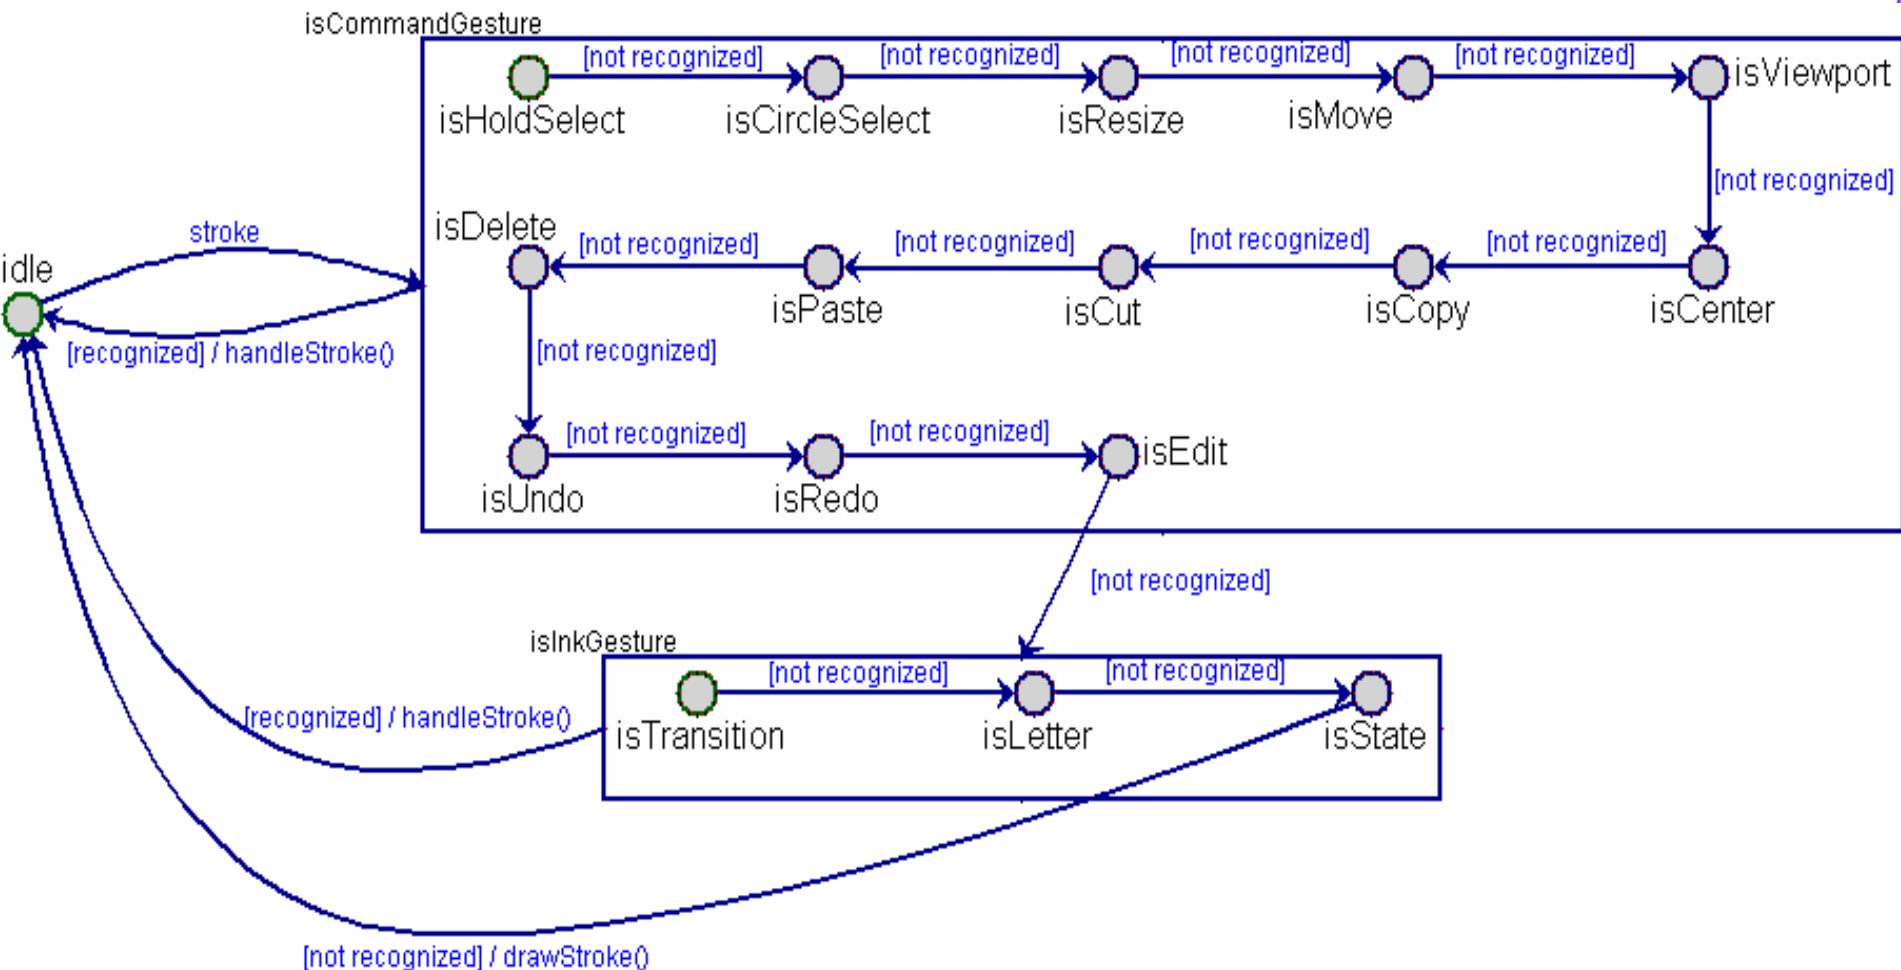

Supported Commands (cont.)

Command	Gesture	Pie Menu Item
Delete		Yes
Edit Labels		No

How interpretation works

Statechart Diagram Validation

- A valid statechart diagram has to have a default state.

Agenda

- Implementation Details
- SATIN
- Introduction to Statecharts
- TSS Syntax
- Demo
- Conclusion
- Future work

Demo

Conclusion

- SATIN saves time by providing a concrete framework for pen-based applications.
- It provides many of the common features in pen-based applications

Conclusion

- It is hard to design gestures that are easy to learn by humans and easy to recognize by computers¹.
- Studies found that users who are used to using PDAs are better at designing "good" gestures¹.

1. Refer to reference [3].

Remaining work

- Fix some known bugs:
 - Cannot edit transitions' labels.
 - When opening a saved file, transitions' labels do not show up.
 - Non-recognized objects are not saved.
 - Cannot select labels.
 - Moving, resizing, and deleting states and transitions don't always work.
- Write the report.

Future work

- Support composite and orthogonal states.
- Keep transitions the way they were drawn.
